

# Two Compelling Reasons for SAP S/4HANA

**ONLY ERP**  
designed to fully  
leverage in-memory

+

**ONLY ERP**  
offered consistently  
in all environments

- In-memory is the answer to legacy DB constraints
- A real-time foundation extends into IoT, Predictive Analytics and Machine Learning
- Other Cloud ERP systems are based on 40-year old RDBMS

- Other ERP vendors offer a single product for on-premise or private cloud, and a completely different (UI, data model, processes) solution in SaaS
- Still other ERP vendors only offer SaaS. If your needs don't fit their coverage, or if you cannot run SaaS in some places, the model doesn't work
